About :

I'm Back End Developer with experience building websites backend , web services , and Mobile App APIs , My role is to manage the interchange of data between the server and the users , development of all server-side logic, definition and maintenance of the central database, and ensuring high performance and responsiveness to requests from the front-end , security and common attacks and how to defend the System from it .

Projects

- ### Super Market Dashboard

    This project is a **Supermarket Dashboard** that simplifies the checkout process with a **barcode scanner** for quick product registration. It provides real-time updates on product info, pricing, and inventory, ensuring efficient sales tracking and smooth store operations.

- ### College Platform Repository Pattern

    This project is a management system for any college to add courses and register it to students by students and 5 roles each one have limited permissions and quizzes with questions , student can answer and doctor can add and super admin selects who will be in the system and crud for all models , and other details in README.md file

- ### Multi Vendor Ecommerce

    This project is a **Multi-Vendor E-commerce Platform** featuring an integrated **Payment System** for seamless transactions and **Notifications** to keep vendors and customers updated on orders, payments, and delivery statuses.
